

**DSC changes
schedule for this
week's meeting**

The Delta Stewardship Council (DSC) is altering its meeting schedule in order to accommodate the inclusion of almost 1,000 public comments into the fourth staff draft Delta Plan. The meeting originally scheduled for today and tomorrow, May 26 and 27, has been postponed until next month. More details and an updated schedule are available in the latest edition of the DSC [newsletter](#).

**Delta Science Program
looking to fill
lead scientist position**

The DSC and the U.S. Geological Survey are seeking an aquatic or ecosystem scientist to become the new lead scientist of the Delta Science Program (DSP). The individual will work with the DSP, the Delta Independent Science Board, and the DSC to develop a Delta science agenda that will support the Delta Plan. More details, including how to get information on applying for the position, can be found in this [news release](#).

**DSC chair
interviewed by
BBC radio program**

Phil Isenberg, chair of the DSC, was recently interviewed by a BBC radio program about the challenges California is facing when it comes to water supply and the Delta ecosystem. The program, "California Gasping," was part of a series that looks at the human effect on the environment and how the environment reacts. You can listen to the report on the [BBC](#) website.

**Water board to hold
scoping meeting on
Delta salinity, river flow**

The State Water Resources Control Board will hold a scoping meeting on Monday, June 6, in Sacramento to discuss its [review](#) of the Bay-Delta Plan. The topics will include southern Delta salinity, and flow objectives for the San Joaquin River. Meeting details and more information are included in this [revised notice](#).

**Reclamation reports
on climate change
risks to river basins**

The U.S. [Bureau of Reclamation](#) has issued a report assessing how climate change risks could affect water operations, hydropower, flood control, and fish and wildlife in the western United States. The [report](#) to Congress looks at several major river basins, including four in California. The findings represent the first coordinated assessment of risks to future water supplies across the basins.

**DWR creates new
blog dedicated
to climate change**

DWR has launched a new blog featuring climate change and water resource viewpoints from California and around the world. [Current Perspectives](#) will feature items on successful climate change adaptation, and viewpoints on potential strategies for addressing climate change challenges. To submit a blog post, contact [Michael Healey](#).
